

Rope Driven Trolley HAR 600-106/125

Koltek Trolley type HAR600 is produced as HAR600-106 for track profile KOT106 or as HAR600-125 for track profile KOT125

The traverse trolley is equipped with a pulley wheel for manual rope operation. The length of the rope can be as long as required. You may buy the rope locally when you know the required length or we can include it in our delivery. The rope shall have a diameter of minimum 10 mm, depending on type of rope.

The rollers are made from stainless steel and aluminium. The traverse trolley is retained on the track by safety claws, which prevent it from falling off the track. The trolley is equipped with suspension points for both the primary and the secondary wires.
