

Interlift 200 Junior (IL200) is a unique type of monorail trolley with the ability to climb on a special Koltek® track in all directions, even vertically. It can travel through curves with a very small radius and can be erected almost anywhere. With the Interlift 200 you can solve most access problems.

The Koltek® Interlift is a patented concept and bases its movement on friction between the special designed Interlift wheel system and the Koltek® track type KOT106.

Interlift Junior (IL200) is a smaller version of Interlift 400 which both can be installed on continuous multi level track systems. IL200 is intended to give the single suspended platform WT402 a safe horizontal movement and when you need to change to a higher or lower level in the track system, the Interlift takes the lifting wires from one working level to the next where you can reinstall the wires to the platform.

Technical Data

Safe Working Load: SWL (WLL)
600 Kg on horizontal track

IL200 has been designed for use with max working load up to max 7 degree angle on the track (horizontal=0 degree)
As it is not equipped with any secondary overspeed brake (ref. to EN1808).

Weight: 27 – 36 Kg (Dep. on motor type)
Travelling speed: Std. 7,5 m/min
Motors: Std. 2 x 120W 3 Phase
Other motors on request.
